

Annexure I (For Project Proposal for BEE)

1. Project Statement : The proposed AI Image Generator will provide a seamless solution for creating custom images, allowing users to input text prompts to generate high-quality visuals instantly. By leveraging the MERN stack and integrating Cloudinary for AI image generation and storage, the platform will reduce the reliance on manual design tools and stock images, offering a more efficient and accessible way to produce personalized images for various uses, such as marketing, content creation, and more.
2. Approximate duration (in hours) to complete the project: 100 hrs 3. Proposed Project In charge: Dimple mam 4. Team Members along with roll no's:
 - a. Krishna Khandelwal (2210991813)
 - b. Lovish Garg (2210991858)
 - c. Keshav Singla(2210991786)
 - d. Keshav Yogi(2210991788)
 - e. Madhav Sharma(2210991862)
5. Check Points:
 - a. Does the project statement result in a product? If yes, what type of product?
 - Yes, a digital AI Image Generator, which can be a web application that integrates text-based input for generating custom images using AI, and stores them on Cloudinary for easy access and sharing.
 - b. If it is a product, can a prototype be made, if not, what is it, which we can produce that our teachers can evaluate?
 - Yes, a prototype can be made for the project, where users can input text prompts to generate AI images and store them on Cloudinary.
 - c. Does the project statement use multiple concepts to achieve the outcome? Yes
 - d. Does it have enough for our team members to do a sufficient amount of work? Yes
6. Technical Nodes (add more rows in the table below, if required)

Subject / Area / Topic	Technical Nodes
Backend Development	MongoDB, Express.js, Node.js, Cloudinary Api
Frontend Development	React.js
Database Management	MongoDB

7. Prerequisites (in terms of knowledge, concepts and material) for doing the Project:

Understanding of MERN stack (MongoDB, Express.js, React.js, Node.js)

Experience with HTML, CSS and JavaScript

Familiarity with database management (e.g., MongoDB)

Understanding of Cloudinary Api

8. Material that may be required to make the project and where it might be available

Laptops/Desktops with internet access

MERN stack setup on local machines

Cloudinary for Ai integration

Code editor (e.g., VS Code)

Online resources and documentation (available on official websites and platforms like MDN, Stack Overflow)

9. What could the total cost of the project?

N/A

10. Resources available to us:

Laptops/Desktops with required software installed

Internet access

Online documentation and tutorials
